

INDEX FORM FOR FIT FILES

This information does not have to be written out for each item to be filed. Instead, fill in Lines 1-3 and photocopy onto yellow paper to make the form obvious in the file. Then under line 4, check the respective box on the yellow sheets. Place the form directly in front of the material it represents.

Mr. Edward Kowalski
USEPA Region V
Office of Regional
Mail Code: 5-CTUB-03
230 South Dearborn Street
Chicago, Illinois 60604

Dear Mr. Kowalski:

Enclosed are two copies of the Final Volumetric Rankings prepared by the Contract Evidence Audit Team (CEAT-TechLaw) for the Ninth Avenue and U.S. Scrap sites. The rankings are based upon information obtained from the November, 1988 deposition of Mr. Steve Martell. The May 1989 report reflects the following changes in assumptions based upon new information revealed in the Martell testimony: U.S. Scrap site operation from 1976 to 1973, inclusive; and Ninth Avenue site operation from 1973 to 1975, inclusive. Waste amounts allocated to both sites in 1973 were divided evenly between the two sites.

All specific modifications which you provided to the CEAT by May 2, 1989 have been included in the final report calculations.

If you have any questions or comments regarding the rankings, the assumptions, or the report, please contact me at (312) 888-0664.

Sincerely,

Melissa Hlebasko

**** Privileged - Prepared for Litigation ****

This work is being conducted on behalf of the Environmental Protection Agency's (EPA) National Enforcement Investigations Center (NEIC) under EPA contract 68-01-7369 for Site/Spill Identifier Nos. D2 and Z8.

DEFINITIONS AND ASSUMPTIONS

NINTH AVENUE SITE/U.S. SCRAP SITE DEFINITIONS AND ASSUMPTIONS

The following is the guide used by the National Enforcement Investigations Center (NEIC)/Contract Evidence Audit Team (CEAT-TechLaw) in the development of the April 1989 Ninth Avenue and U.S. Scrap sites transactional database and volumetric ranking. Transactional information was extracted from the November 1988 deposition of Steve Martell. All information was provided by Ed Kowalski and Allison Hiltner, the USEPA Region V contacts.

site

The disposal location as indicated in the deposition was entered into this field. Potentially responsible parties (PRPs) were classified as having disposed of wastes at either U.S. Scrap or Ninth Avenue, both sites, or neither site. If the deposition indicated that both sites were used for disposal; the frequency, quantity, and volume were split equally between the two sites.

Disposal was not recorded for a site if the following phrases were cited in the deposition:

"No, I don't think they did ..."
"I can't recall ..."
"I'm not sure ..."
"Possibly they did, but I'm still not sure ..."

Generator

The name, address, affiliated companies, and alternate names were extracted from the deposition and entered into this field.

The project contacts made the final selection of generators to be included in the final volumetric ranking report. Therefore, certain generators cited in the deposition might not be included in the final report.

Date

The year of each transaction was entered into this field.

According to page 8 of the deposition, disposal occurred at the two sites during the following years:

Ninth Avenue: 1973 through 1975, inclusive.
U.S. Scrap: 1965 through 1973, inclusive.

Therefore, if the deposition cited waste disposal occurred at both sites during 1973, the frequency, quantity, and volume were

split equally between both sites. For example, if both sites were used from 1972 through 1975 for the disposal of one 4,000 gallon tanker load per year:

U.S. Scrap

1972 = 4,000 Gallons
1973 = 2,000 Gallons

Total = 6,000 Gallons

Ninth Avenue

1973 = 2,000 Gallons
1974 = 4,000 Gallons
1975 = 4,000 Gallons

Total = 10,000 Gallons

If the deposition indicated a range of years for which transactions occurred; the frequency, quantity, and volume were split equally between the number of years.

If the exact year was not clearly specified in the deposition, an "E" was entered into the database following the year to indicate that the date was estimated.

Waste Type

The type of waste disposed of was extracted from the deposition and entered into this field.

If information regarding the type of waste was not recalled, the phrase: "waste type not recalled" was entered into the field.

Frequency

The number of times a generator disposed of wastes each year was entered into this field. If a generator used both sites for disposal, the frequency was split equally between the sites.

The frequency was used to calculate the total volume by multiplying the frequency, the quantity, and the unit conversion factor together. If the frequency was not indicated in the deposition, zero was entered into the frequency field and no volume was calculated.

If the frequency cited in the deposition was for a range of years, or both sites, the frequency was calculated by dividing the total by the number of years and the number of sites. For example, if 100 loads of waste were disposed of at both sites between 1971 through 1974, the frequency for each record was entered as 20.

1971 - 1973 = 3 Years of Disposal at U.S. Scrap
1973 - 1974 = 2 Years of Disposal at Ninth Avenue

100 Loads ÷ 5 Years = 20 Loads/Year

The phrase "every couple of months" was assumed to be a frequency of every 2 months.

The phrase "disposal every working day" was assumed to be 260 days per year. "Disposal every day" and "seven days a week" was assumed to be 365 days per year.

Quantity

The number of units included in each load was entered in this field.

If the indicated quantity was a range, the median of the range was entered (e.g., 10-20 drums = 15 drums).

Unit

The type of container which was used to ship wastes to the sites was entered into this field. Each unit was assigned a conversion factor to be used to convert the unit to gallons.

The following is a list of the conversion units supplied by the project contact:

Description	Gallons
Pre-January 1, 1970 Semi-Trailer	3025
Post-January 1, 1970 Semi-Trailer	3575
Tanker	4500
Vacuum Truck	4500
Drum	55

All drums brought to the site were assumed to be full.

If the waste type was solid material such as building debris or was described as "yards" of material, no conversion value was used. Therefore, the volume for generators of these wastes was zero gallons.

Volume

If the volume in gallons was specified in the deposition, that information was entered into this field.

If the volume was provided in the deposition, the total volume was for each record was determined by multiplying the frequency and the volume together.

Document Reference

The page numbers of the deposition which contained information about the generator were listed in this field.

Comments

Additional information regarding transactions was entered into this field. Each comment was assigned a number. The following is a list of comments:

1. Additional transactional details not provided.
2. Frequency of transactions not indicated.
3. Unit not converted to gallons
4. Quantity not indicated.
5. Range of dates not indicated.
6. No recollection.
7. Uncertain if disposal occurred at U.S. Scrap site.
8. Uncertain if disposal occurred at Ninth Avenue site.
9. Did not dump at either U.S. Scrap or Ninth Avenue.
10. Address confirmation with driver, Leroy Brown.
11. Uncertain if disposed at either Ninth Avenue or U.S. Scrap.
12. Volume and frequency of disposal not recalled.

IMPORTANT NOTICE

This compilation is not a nonbinding allocation of responsibility as contemplated by Section 122(e)(3) of the Comprehensive Environmental Response, Compensation and Liability Act. It is based entirely on the deposition testimony of Steve Martell, taken November 21 and 22, 1988, and is intended as nothing more than a summary of that testimony. The compilation includes numerous assumptions necessitated by a lack of information. In addition, volumes were not calculated for a number of potentially responsible parties (PRPs) due to various technical difficulties in calculating a specific volume for them. For many of these PRPs a "zero" volume amount was assigned. This should in no way be interpreted as an indication of no liability or reduced liability for disposal of hazardous substances at the sites. Finally, the U.S. EPA has performed no review of the U.S. Scrap portion of the compilation, and therefore makes no representations whatsoever as to any aspect of that portion, including its accuracy.
